How to connect a Dataset API

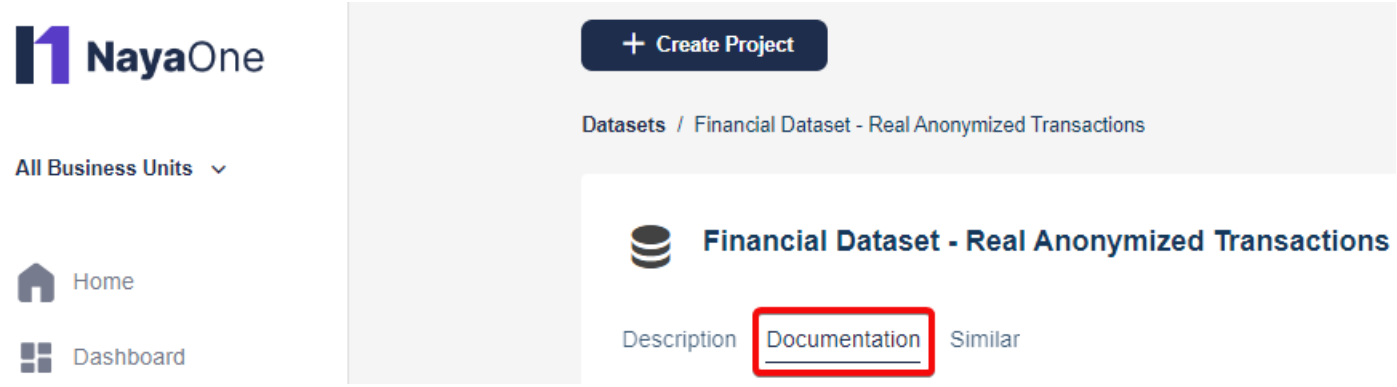
Using Data · https://nayaone.com/lou0lh9x2qkjngmo3lq4nz09dxorxnzcz51dpqp8/datasets-for-dev-en/how-connect-dataset-api/

Where to find Datasets and which endpoints you'll need.

How to select a Dataset's API

Select a dataset from the Datasets Marketplace.

Click the documentation tab:



Choose your **language** and copy the raw API:

Endpoints

The dedicated endpoint for data is at: https://data.nayaone.com

Endpoints of the requests are: https://data.nayaone.com/<data-table>

API rate limits (and how to change them)

To prevent unauthorised usage, there's a rate limit of **10 records** per request.

To **increase the limit** apply the `?offset=10` parameter. Change by multiples of 10.

To pull **all the Dataset**, simply remove the offset parameter.

Queries in **PostgREST format** can be passed into the API for greater Dataset exploration. View full PostgREST documentation.

API response	Description
200	OK
4xx	Bad request
5xx	Service unavailable
