How to upload local code to a Sandpit

You can upload local code – depending on certain factors.

It's possible to upload code using collaboration solutions such as **GitLab**, **Intralinks** and **SFTP**.

However, you'll need to decide if you want NayaOne to act as the middleman.

For example, granting NayaOne view access to a specific Intralinks workspace. Where we pull down the code and upload into your Sandpit.

Please contact us to discuss your options.
